

It's an exciting time for Monticello. Work on a new fiber optic network is ready to begin. This project will take Monticello into the future by providing you the latest service and newest communications technology choices available.

You are receiving this note because construction of the fiber network will soon begin in your neighborhood.

Prior to construction, a field representative will be placing flags or spray painting marks along the proposed route. ***If you have an invisible dog fence, sprinklers, private power or any other underground property improvements (not regular city utilities)*** you feel may be in close proximity to the construction corridor, please mark them yourself and call (763) 295-3825 to report them to the construction manager.

TDS and its contractors will be using a directional drilling technique to ensure minimal disruption to property whenever possible; however, this is still a construction project and as such there will be places that digging will be required. Please be assured that as areas are completed, clean-up activities will follow within two days to restore any disruption caused by the construction activities.

Crews will be utilizing existing utility easements and public right-of-ways as much as possible. Some property owners may be asked to grant additional utility easements to help facilitate construction and may be contacted for individual easements by our field agents as needed.

We appreciate your patience and cooperation in the construction of this exciting service upgrade in Monticello. **If you have general questions about the project visit our website at www.tdstelecom.com/monticellofiber.**
